PanelSpec 3.0 [Patch Notes]

Version 3.0 - Patch 2   **August 8, 2025**

Updates

Quote Reports
- There is now a status message below Quote Number that informs User of whether or not a quote has been finalized or not to help avoid confusion.
- There is now an alert system built into quote reports that inform Users if a specific drawing has a problem with it. A message will display above the part list explaining the issue and how to fix it.
- Quote reports now display more project information fields including the following:
    - Name
    - Email
    - Company
    - Address
    - Phone

Program Functionality
- Certain connectors with missing graphics have been fixed.
- Projects with very large amounts of drawings will now have the list of tabs be horizontally scrollable instead of stacking and shrinking the design space.

Bug Fixes

Our team has done extensive quality assurance testing with Panel Spec 3, and is at the ready to find and fix any new bugs that may arise. If you would like to report a bug to us, please send an email stating in detail what the issue is to the following address: **sales@covid.com**

PanelSpec 3.0

[Patch Notes]

Version 3.0 - Patch 1   **May 6, 2025**

Updates

UI/UX

- Clearance values have been corrected for all connectors. To see a connector's safe area, click on the blue **Clearances** button at the upper left of the design space.
- Connector graphics now have improved and cleaner visuals.
- Plate and panel graphics now have consistent colors.
- Added Arial Bold to connector label font selector.

Program Functionality

- Label text in the design space can no longer be highlighted. This will prevent connectors from wrongly duplicating when repositioning them while labels are highlighted.
- The undo and redo buttons should no longer jumble drawings or delete large amounts of work. This bug was a related symptom of the issue listed above.
- Quote rendering has been further optimized to eliminate drawing images sometimes not loading properly within quote reports.

Bug Fixes

PanelSpec 3.0   [Patch Notes]

Version 3.0 - Initial Release   **January 7, 2025**

New Features
UI/UX
- An entirely new user interface with improved speed and functionality has been implemented.
- User experience is now designed to remain simple, while also enabling greater design control.

Program Functionality
- Added multi-tasking support which enables quick swapping between designs within a project.
- Added improved project quotes with extensive detail and pricing breakdowns.
- Revamped project interface to enable rapid setup of plates and quoting projects.
- Panel Spec is now cloud-based and allows access to designs anywhere, anytime.
- New enhanced collaboration options allow sharing designs for seamless team feedback.
- There is now an option to engrave or print labels on plates and panels.

Design Space Functionality
- Labels can now be in custom RGB colors.
- Label fonts, justifications, rotations, sizes, and offsets can now be modified freely.
- Connectors are now dragged and dropped from a hierarchy rather than added from another page.
- Connectors can be rotated 360° in both 1° and 90° increments for optimal placement.
- Connectors can now be duplicated many times and arranged with a single click.
- All products and components are now selectable and modifiable in one place.
